Datatypes and Column Operations: Takeaways

Syntax

- Concatenating two strings:

```
SELECT 'Data' || 'quest';
```

- Concatenating two columns and renaming the result

```
SELECT column_1 || column_2 AS new_name
   FROM table;
```

- Concatenating two columns with a comma as a separator:

```
SELECT column_1 || ',' || column_2
   FROM table;
```

Concepts

- SQLite stores data in different classes. Some of them are *Integer*, *Real* and *Text*.

- It's common to refer to these storage classes as datatypes.

- Datatypes are common in DBMSs
