Introduction to Databases: Takeaways ↪

Syntax

- Display the whole table

```
SELECT *
  FROM table_name;
```

- Select specific columns from a table

```
SELECT column_name_1, column_name_2
  FROM table_name;
```

Concepts

- A table is a data arranged into rows and columns.
- A database is a set of tables with important features like security and stronger data management features.
- Column names are metadata.
- The semicolon indicates that we have reached the end of the query.
